Seungwon Lim

Ph.D. Student, Yonsei University, South Korea

sngwon@yonsei.ac.kr | sngwonlim.github.io | Google Scholar | GitHub | LinkedIn

Hi! I'm Seungwon Lim, a 2nd-year Ph.D. student at Yonsei University, South Korea. My research focuses on how **AI agents interact with humans**: understanding these dynamics, simulating them at scale through **environment generation** and **human-like user simulators**, and leveraging them for **training** and **valid evaluation**.

Research Experience

Microsoft Research Asia Apr 2026 – Oct 2026 (6 mos)
Research Scientist Intern (Mentor: Jianxun Lian)

LG AI Research, EXAONE Lab Aug 2025 – Feb 2026 (7 mos)
Research Scientist Intern
Built scalable synthetic tool-use environments with verifiable task criteria for training foundation models on agentic tasks. Contributed to two foundation model releases: K-EXAONE and EXAONE 4.5.

Selected Research

Scalable environment & task generation COLM 2026 | First author
Learning to Comply: Workflow-Grounded Environment Generation for Training Procedurally Compliant Agents

- Build a workflow-grounded framework for scalable environment & task generation with a verifiable evaluation system, aimed at improving agents' procedural compliance.
- Train agents with procedure-aware rewards, improving procedural compliance of tool-using agents.

Valid agent evaluation with human-like user simulators Under Review (ICLR 2027) | First author
Towards Valid Agent Evaluation: Reconciling Task Fidelity and Human Plausibility in LLM-based Interactive User Simulation

- Define two validity criteria, task fidelity and human plausibility, for simulator-based agent evaluation.
- Build a human-like and reliable user simulator for valid evaluation of interactive agents.

Environment for evaluating/training dialogue agents Under Review (ICLR 2027) | First author
Rethinking the Evaluation of AI Companions through the Lens of User Retention

- Build an interactive environment where simulated users in a multi-session setup can leave.
- Train agents with turn-level RL using the user simulator's satisfaction signals.

Exploration-driven decision-making EMNLP 2025 | First author
VisEscape: A Benchmark for Evaluating Exploration-driven Decision-making in Virtual Escape Rooms

- Evaluate multimodal agents' exploration-driven decision-making, with escape room games as a testbed.
- Show that memory management and self-reflection strengthen agents' reasoning during exploration.

How personality shapes agent behavior ACL 2025, Oral | First author
Persona Dynamics: Unveiling the Impact of Persona Traits on Agents in Text-Based Games

- Ground human personality traits in LLM agents to study persona-driven decision-making.
- Show that persona traits shape agents' behavior, and that high Openness improves agents' exploration.

Measuring LLM personality NAACL 2025 Findings | First author
Do LLMs Have Distinct and Consistent Personality? TRAIT: Personality Testset designed for LLMs with Psychometrics

- Design a psychometrically validated test that reliably measures the personality of LLMs.
- Find that post-training consistently shifts the personality of LLMs; featured in *Science News*.

Education

Yonsei University 2023 – Present
M.S. in Computer Science, Ph.D. in Artificial Intelligence, LangAGI Lab (Advisor: Prof. Jinyoung Yeo)

Yonsei University 2017 – 2022
B.S. in Computer Science
